POWERFUL LIGHT RELIABLE AND MANY MODELS TO CHOOSE FROM: DESIGNED FOR PROFESSIONAL CORE DRILLING!

USE

CARDI *il Talpa* core drill motor professional series has been specifically designed for a professional everyday use! Great Power, reliability and flexibility together with low weight are the main strength of this series. Designed to drill into any kind of construction material (except wood): drilling range diameter from 25 to 500 mm, maximum drilling depth 8-10 m. An heavy duty 2, 3 or 4 speed gearbox allows best cutting speed selection. Maximum flexibility: the single-phase motor runs on regular 230 V house power.

STRENGTH

- Equipped with CARDI protection systems:
 - electronic clutch: protects motor and operator in case of overload;
 - mechanical clutch: protects operator when jamming;
 - soft start: ensures smooth and safe start;
 - R.C.D. (Residual current device): ensures additional electrical safety;
- aluminum alloy made gearbox and motor for maximum strength and lightweight;
- high quality *Columbus* series drill stands: the bearing based carriage, moving on a steel made column, allows maximum accuracy and requires no lifelong adjustment since no component wears out.
- designed in compliance with international and European safety standards;
- compatible with standard core bits, easily available on the market (1 1/4" UNC). Easy core bit removal with the new CARDIFACILE easy release device for bits;
- quick and effortless drilling due to the new CARDI Feed System that powers the travel of the carriage on the column (available as accessory). The CARDI Feed System (*SERVO CARDI 1* and *SERVO CARDI 2* available as accessory) allows:
 - safety and comfort improvement: the operator can monitor drilling operations from nearby;
 - less diamond wearing;
 - shorter drilling time;
- a wide range of accessories, developed throughout CARDI 20 years experience on the professional market, can solve every problem experienced by professionals.
